

INTRODUCING

Orizzonte Sistemi Navali

Products

Orizzonte Sistemi Navali (OSN) provides surface ships of various sizes and missions, with the common denominator of being fully made in Italy.

This means that ship platform and related systems are designed and built by Fincantieri, as well as weapons, sensors and combat management equipment are supplied by SELEX Sistemi Integrati, the system integration company owned by Finmeccanica.

This also means that the ships have, at the same time, innovative design and proven technology being derived from original concepts in service with the Italian Navy and many other navies worldwide.

VERSATILE PATROL VESSELS
FREMM FRIGATES
SPECIAL SHIPS
MOSAIC CORVETTES
AND LIGHT FRIGATES
HORIZON DESTROYERS
AMPHIBIOUS ASSAULT
CARRIERS

Services

The Integrated Ship is the goal of OSN's commitment. The integrated Ship means, from the start, considering the vessel design as a whole with the aim of harmonizing all its components: platform, combat system and crew.

OSN added value is that of developing the integrated ship taking into account how it can be assimilated in the reference scenario according to Customer organization, structure, skill and practice.

This results in a series of activities and services, which can be made available to the Customer as part of the manufacturing process or as a specific innovative consulting, focused to ensure high levels of effectiveness in operation, maintenance, through life and logistics.

SHIP SYNTHESIS MODELING

BRAND

ORIZZONTE SISTEMI NAVALI S.p.A. was originally created by Fincantieri and Finmeccanica groups with the specific task of managing all important naval programmes, such as the recent Horizon destroyers and the FREMM frigates, in the domestic and international markets.

In 2009, in order to emphasize the role of OSN as a key supplier of integrated naval solutions, Finmeccanica transferred the asset to its subsidiary Selex Sistemi Integrati.

Now, the Company is a global player supplying new generation surface vessels, in a comprehensive framework of technical services addressed to tailor the operational and logistic footprints of the products, according to the specific environment of each individual Customer, from the ship concept to ship operation and through life support.

INTEGRATED SHIPS
in INTEGRATED DOMAINS,
from TOTAL SHIP DESIGN
to GLOBAL SHIP SYSTEM.
